CHILDREN'S MEMORIAL RESEARCH CENTER

Client:

The Children's Memorial Research Center is the research arm of Children's Memorial Hospital, located in the heart of Lincoln Park, in Chicago, Illinois. Children's Memorial Hospital has a 125-year history of providing compassionate care in a family-centered environment.

Background:

CMRC wanted to dramatically speed up its connection to a research facility on the nearby campus of Northwestern University. This would allow CMRC to enjoy real-time collaboration and data sharing with their colleagues at Northwestern, as well as in other research centers around the world.

Solution:

The Sunesys solution was an extremely high-speed Dark Fiber connection linking CMRC to Northwestern University—a Sunesys client. CMRC can now communicate with Northwestern and a variety of other research universities at lightning speed, enjoying real-time collaboration and the transfer and sharing of mass quantities of data without delay.

“Sunesys was already putting up the network at Northwestern, and they agreed to run a slightly different route to accommodate our needs and loop us in. It worked out perfectly.”

Jason Ruprecht

Director, Information Technologies
Children's Memorial Research Center
