

SUNESYS

Englewood Hospital Case Study

January 15, 2009

ENGLEWOOD HOSPITAL AND MEDICAL CENTER

Englewood Hospital and Medical Center is the largest voluntary acute care hospital in Bergen County and the third largest in the state of New Jersey. It is a center of education and research with emphasis on state-of-the-art patient care, teaching and research.

Solution:

Sunesys provided a dedicated dark fiber optic network to connect three locations in Englewood and Cresskill, NJ. The network provided the robust bandwidth and security necessary for several existing and new applications, such as PACS, electronic medical records and a new data center.

SIDEBAR QUOTE:

“The Sunesys dark fiber solution will allow us to meet and exceed our long-term goals. It eclipsed its competitors both technically and financially, and was more competitively priced than any other option.”
